

Duraprints Photo Scanning Price List. 5/1/2023.

There can be a number of important aspects to consider before starting a successful photo scanning project. We meet with our clients by appointment to ensure a senior technician is available to provide helpful advice. Consultations are free and without obligation.

Ph (07) 33991177 or send us an email to arrange an appointment or request more information on securing your photo collection.

Prices for high resolution scanning of photo collections are based on photo quantities* and how they are presented. Digital JPG files are supplied on a USB3 flash drive or a portable hard drive. DVD's are also available.

System 1: Prices for semi auto scanning of loose photo collections.

Scan 51 to 300 photos @ 68 cents each.

Scan 301 or more photos @ 59 cents each.

Notes:

*We have a minimum semi auto scanning project fee of \$34 for scanning up to 50 photos.

Photo size restrictions for semi auto scanning are from 3 inch sq (8cm sq) up to 6x8 inch (16x21cm). Photos must be flat, non flaking with no contamination including glue.

To remove and replace photos in plastic album pockets add 10 cents per photo.

Our semi auto system is generally suitable for newer photos, post 1960's.

System 2: Prices for manual scanning of loose photos or photos in albums.

Scan 21 to 50 photos @ \$2.25 each.

Scan 51 to 100 photos @ \$1.90 each.

Scan 101 to 300 photos @ \$1.60 each.

Scan 301 or more photos @ \$1.40 each.

Notes:

*We have a minimum manual scanning project fee of \$45 for scanning up to 20 photos.

We do not recommend attempting to remove photos from "sticky albums" as damage can easily occur. We can manually scan these photos perfectly without removing them from albums.

For photos larger than A3 (30cm x 42cm) scanning prices are available by quotation.

Our manual system is suitable for older photos, pre 1960's, mounted photos, photos in sticky albums, curled, crazed and larger photos.

Key benefits of our two professional scanning systems.

Our scanning service incorporates skilled Photoshop technicians individually orientating and enhancing each scanned image with colour, exposure and contrast adjustments at no extra cost. This process can significantly improve the results. Most suppliers charge more for this scan editing stage, or omit this process entirely.

Both high and low resolution JPG digital images are provided in separate folders at no extra cost.

We generally scan to enlarge every digital image at 600ppi. Small photos may be scanned at 1200ppi.

Black & white photos can be converted to mono to remove age related staining at no extra cost.

Photos are scanned and numbered in sequence as presented.

Photo packets and albums are numbered to aid identification and assist in matching the original photos to the digital files.

USB3 flash drives are supplied in a presentation case with a custom printed title of your choice.
